

Horticulture Report. June, 2023

Harry Lauders' Walking Stick (*Corylus Javellana* 'Contorta') Red Majestic

This shrub is hardy to zone 4 and prefers full sun to part shade. It grows to 8-10 feet in both height and width. It is usually grafted onto the root stock of the American filbert. Because of this it will grow suckers that are not contorted and they should be pruned regularly to keep the contorted form. This plant provides winter interest from the contorted branches and Red Majestic provides more summer color. Save the branches for use in floral arrangements.
